

Inflammation Scintigraphy with labeled antibodies

Dear patient,

On behalf of the Service of Nuclear Medicine and the University Hospital we would like to welcome you and provide you with important information regarding your upcoming examination

Registration

Please report to the registration desk of the Service of Nuclear Medicine. Please bring a copy of your health insurance documents with you.

Preparation

No special measures necessary.

Precautions

If you believe you are pregnant, or if you are breastfeeding, please bring this to our attention upon receipt of this information sheet.

Scintigraphy

The examination proper starts with an injection of the radioactive tracer needed for this examination. The substance will bind to activated inflammatory cells. The first scans will be performed 5 hours following the injection, a second scan is scheduled 24 hours following the injection.

Duration

Each scan will last about one hour

Side effects

No side effects are to be expected. Please inform us, if you suffer from any allergies. The radiation dose of the examination is comparable to one to two times the natural yearly radiation dose in Zurich. The examination can also be performed in children.

Examination report

After the examination, the scans are analyzed by nuclear medicine physicians and radiologists. The results usually are communicated to your referring doctor within a few hours. He will inform you on the findings.

Important:

In case you are unable to appear on the scheduled examination time, please inform us at least 24h before the examination. Otherwise we may have to bill you for the costs incurred by us.
